

ChM produces and distributes advanced medical solutions in 3 main divisions:

Comprehensive portfolio of products for traumatology, including systems designed for fractures fixation and deformities correction of extremities and pelvis.

Wide range of advanced solutions for cervical and thoraco-lumbar stabilization of spine, including pedicle screw systems for open and MIS procedures, various interbody devices and fixation plates.

Instruments and implants for cranio-maxillofacial surgeries, dedicated for fracture fixations, reconstructions, distractions and orthognathic surgeries.

WEDGE TIBIA PLATES

Design aligned with anatomy

- optimized anatomical profile
- fit to a wide range of anatomies
- facilitated anatomical reduction

Multiple plate options

- left and right plates
- wedge size from 3mm to 17.5mm

Chamfered plate borders

- minimized soft-tissue irritation

4 anatomically directed screws

- proximal holes accept 6.5mm cancellous screw, distal holes accept 5mm screw
- divergent to improve plate and fixation stability
- avoided collisions with articular surface

Locking hole design

- the screws heads do not protrude above the surface of the plate what significantly reduces tissue irritation
- increased strength of the screw-to-plate threaded connection
- bottom extrusion reduces surface contact area with the bone

K-wire holes

- provisional plate positioning
- mimic periarticular screws trajectory
